

AIX HEALTH CHECK

Provided by IBM Certified Advanced Technical Experts

AIX Health Check is...

Software that scans AIX systems for issues. Just like going to a doctor for a full check-up. A report of all features of the AIX system is generated, and it shows how the system is doing and what can be improved. The report shows what is wrong, and how to fix it. You can run it yourself. You can run it on an unlimited number of AIX systems. And it supports up to AIX 7.1, PowerHA/HACMP and VIOS.

When to use AIX Health Check

- Before putting a new system into production - to make sure the system is installed and configured correctly.
- Before and after doing a change on a server - to make sure no issues exist before applying patches, and that no adverse situations were introduced as part of a change.
- During audits - to make sure a system is compliant with company and federal regulations.
- During yearly performance reviews - to determine if the system administrators have taken good care of the AIX servers.
- Before or during any Bare Metal Restore or Disaster Recovery exercises - to validate that an AIX server is recovered correctly.
- When taking over AIX systems from others or other accounts to perform an initial quality scan.
- As part of the daily routine to check and monitor systems, because not daily reviewing AIX systems, can have costly consequences.

Special Power Systems Technical University discount

Limited time offer for attendees to the IBM 2012 Power Systems Technical University in Dublin or Las Vegas: Order by November 2, 2012 for \$300 conference savings on the regular price of \$2,500.

Key Highlights

- Based on best practices, audit requirements, federal regulations, and years of experience supporting AIX.
- Improves system health and performance.
- Runs 1000+ checks in minutes.
- Reduces manual checking.
- Avoids system outages proactively.
- Reports in CSV, text, HTML or XML in file or email.
- Helps to standardize AIX system configurations.
- Online documentation, support and software updates available.
- Updated regularly.
- Supports AIX 5.2, 5.3, 6.1 and 7.1.
- Supports HACMP/PowerHA.
- Supports Virtual I/O servers.
- Regular price: \$2,500 for unlimited number of systems.
- Sample reports available on www.aixhealthcheck.com.
